

## MA104 Lesson 48-47

### LESSON 48 & 47 - The Gradient and Directional Derivatives

Tuesday, 15 April, 2008

# Outline

- 1 Admin
- 2 Last Class
- 3 THE GRADIENT
  - Course Guide
- 4 DIRECTIONAL DERIVATIVES
  - Definitions
  - Rules for Finding the Directional Derivative
- 5 Examples and Board Problems
  - Do Problem Help
- 6 Look Forward - EXTREMA OF FUNCTIONS OF TWO VARIABLES I

# Admin

- 1 Part II - Orioles (20.5) and Braves (53910)
- 2 We will have class tomorrow (16 April 2008) and Thursday (17 April 2008), but not have class on Friday.
- 3 This means we will have a Problem Solving Lab on 16 April and a quiz on 17 April.
- 4 In other words - Show up Wednesday and Thursday, but not Friday - Any Questions?

# Gradient

Questions?

# Outline

- 1 Admin
- 2 Last Class
- 3 **THE GRADIENT**
  - **Course Guide**
- 4 DIRECTIONAL DERIVATIVES
  - Definitions
  - Rules for Finding the Directional Derivative
- 5 Examples and Board Problems
  - Do Problem Help
- 6 Look Forward - EXTREMA OF FUNCTIONS OF TWO VARIABLES I

# Objectives

- 1 Given a function of two variables, find the gradient vector by hand and using Mathematica at a specified point.
- 2 Find the vector that is normal to the level curve  $f(x, y) = c$  at a specified point.
- 3 Understand that the gradient vector gives the direction of the greatest increase in functional value at a given point for a differentiable function.

# READ

- 1 Stewart: Section 14.6, pages 910-919.

# THINK ABOUT

- 1 In what ways could the gradient be helpful in 3D optimization?

# DO Problems

1 Section 14.6/ 21, 23, 28, 32

# LESSON 47 - DIRECTIONAL DERIVATIVES

## 1 OBJECTIVES:

- 1 Understand what a directional derivative is in terms of a rate of change.
- 2 Given a function  $f$  of two variables, find the directional derivative of  $f$  at a given point in any direction by hand and using Mathematica.

## 2 READ:

- 1 Stewart: Section 14.6, pages 910-919.

## 3 THINK ABOUT:

- 1 Under what assumptions does your answer in problem 3 below accurately describe the rate of change?

## 4 DO:

- 1 Section 14.6/ 1, 3, 7, 8, 11, 15

# Outline

- 2 Last Class
- 3 THE GRADIENT
  - Course Guide
- 4 **DIRECTIONAL DERIVATIVES**
  - **Definitions**
  - Rules for Finding the Directional Derivative
- 5 Examples and Board Problems
  - Do Problem Help
- 6 Look Forward - EXTREMA OF FUNCTIONS OF TWO VARIABLES I

# Directional Derivative

① Definition 9  $D_{\mathbf{u}}f(x, y) = \nabla f(x, y) \cdot \mathbf{u}$

# Directional Derivative

- 1 Definition 9  $D_{\mathbf{u}}f(x, y) = \nabla f(x, y) \cdot \mathbf{u}$
- 2 What is the Directional Derivative?

# Directional Derivative

- 1 Definition 9  $D_{\mathbf{u}}f(x, y) = \nabla f(x, y) \cdot \mathbf{u}$
- 2 What is the Directional Derivative?
- 3 The change in  $f$  in any direction.

# Directional Derivative

- 1 Definition 9  $D_{\mathbf{u}}f(x, y) = \nabla f(x, y) \cdot \mathbf{u}$
- 2 What is the Directional Derivative?
- 3 The change in  $f$  in any direction.
- 4 How much I change if I don't want to go in the steepest path!

# Outline

- 1 Admin
- 2 Last Class
- 3 THE GRADIENT
  - Course Guide
- 4 **DIRECTIONAL DERIVATIVES**
  - Definitions
  - **Rules for Finding the Directional Derivative**
- 5 Examples and Board Problems
  - Do Problem Help
- 6 Look Forward - EXTREMA OF FUNCTIONS OF TWO VARIABLES I

# Rules for Finding the Gradient

- 1 Get the gradient by taking the partial derivatives and put them in vector notation! Then get the gradient and the point you are at by subbing in the values of  $(x,y,z)$

# Rules for Finding the Gradient

- 1 Get the gradient by taking the partial derivatives and put them in vector notation! Then get the gradient and the point you are at by subbing in the values of  $(x,y,z)$
- 2 Get the direction you want into vector notation

# Rules for Finding the Gradient

- 1 Get the gradient by taking the partial derivatives and put them in vector notation! Then get the gradient and the point you are at by subbing in the values of  $(x,y,z)$
- 2 Get the direction you want into vector notation
- 3 Get the vector into a unit vector

# Rules for Finding the Gradient

- 1 Get the gradient by taking the partial derivatives and put them in vector notation! Then get the gradient and the point you are at by subbing in the values of  $(x,y,z)$
- 2 Get the direction you want into vector notation
- 3 Get the vector into a unit vector
- 4 Take the dot product of the unit vector and the gradient -

$$D_u \cdot f_x f_y = D_u f f$$

# Board Work

1 14.6.13

2 14.6.16

3 14.6.17

4 14.6.20

# Board Problems

## 1 Duff Beer

# Board Problems

- 1 Duff Beer
- 2 Mathematica version of the do problems

# Outline

- 2 Last Class
- 3 THE GRADIENT
  - Course Guide
- 4 DIRECTIONAL DERIVATIVES
  - Definitions
  - Rules for Finding the Directional Derivative
- 5 Examples and Board Problems
  - **Do Problem Help**
- 6 Look Forward - EXTREMA OF FUNCTIONS OF TWO VARIABLES I

# DO Problems

- 1 Section 14.6/ 1, 3, 7, 8, 11, 15
- 2 Section 14.6/ 21, 23, 28, 32

# LESSON 50 - EXTREMA OF FUNCTIONS OF TWO VARIABLES I

## 1 OBJECTIVES:

- 1 Given the surface  $z = f(x, y)$ , defined by a function which has continuous partial derivatives over some region, examine the level curves for possible maximum or minimum values.
- 2 Understand the definition of a critical point and be able to find the critical points of a function of two variables.
- 3 Use the Second Derivatives Test to classify a critical point as a local maximum, local minimum, or saddle point.
- 4 Understand why the discriminant will always be negative for a saddle point.

## 2 READ:

- 1 Stewart: Section 14.7, pages 922-928 (Stop at Absolute Max and Min Values).

## 3 THINK ABOUT:

- 1 Compare the methods of finding extrema for single and multivariate functions. What are the similarities/differences?

## 4 DO:

- 1 Section 14.7/ 3, 5, 7, 9, 11
