**General (Retired)  
Frederick M. Franks**  
USA

## Revised & Expanded Second Edition

0-07-353609-1 □ 2005 □ Softcover □ 792 pages

Four years ago recognized scholars of the military, both in uniform and in civilian institutions, believed that during the drawdown of the 1990s the Army had become much too bureaucratic, losing much of its essential and historic character as a vocational profession. Together they produced the highly-acclaimed first edition of *The Future of the Army Profession*, whose editors summarized the project with the words given to field researchers by a frustrated Army Major:

*“How can I be a professional, if there is no profession?”*

Now, after extended operations in Afghanistan and Iraq, new research from a similar group of scholars shows that many aspects of profession have been restored, especially in the field Army. **But can the strategic leaders of the Army now capture and maintain that professionalism while simultaneously fighting a war and transforming the Army?** On this question, the most informed perspectives available are contained in the seven parts of this second edition and they argue that **the Army’s leaders must do so if they are to be successful in either endeavor.** Organized around the profession’s expert knowledge, this text is designed for the development of military professionals at all levels, as well as for civilian courses in national security and military affairs.

**The Future of the Army Profession** is listed in: The U.S. Army Chief of Staff’s Professional Reading List published by the U.S. Army Center for Military History, [www.army.mil/cmh-pg](http://www.army.mil/cmh-pg).
